Global Challenges in collaboration with ANCORS will be hosting a seminar by Professor Niels Anderson, Director of Polar DTU, the Polar Centre of the Technical University of Denmark (DTU) and Chief Geodetic Advisor on Demarcation to the Ministry of Foreign Affairs of the Kingdom of Denmark.

The Arctic – A Future Melting Pot?
Climate Change has resulted in increasing melting of Arctic ice cover, opening up the region for development including more shipping through Arctic waters. The Arctic also has the potential to become a ‘high class pantry’ for valuable marine resources. At the same time the Arctic Ocean is becoming a scene for future sovereignty disputes. What future infrastructure is needed to secure a sustainable development of the region? How will it be governed in the face of increasing global interest? How can research contribute and perhaps play a strategic role in keeping tensions low in the high North?

Date: Thursday 12\textsuperscript{th} March
Location: Room 233.116, ITAMS Building, iCampus
Time: 12.00pm – 2.00pm (lunch provided)
RSVP: Tuesday 10\textsuperscript{th} March to
Myree Mitchell myree@uow.edu.au
