A group of multi-disciplinary researchers from the University of Wollongong have developed a website to help people living with a dementia, and their carers, manage their medications. Accurate medication management is important because mistakes can lead to health problems and hospitalisation.

We know that there is generally little support for informal caregivers from Culturally and Linguistically Diverse (CALD) backgrounds, so this site attempts to help bridge this gap.

The site is currently being evaluated online. To provide feedback or just take a look, please go to: [http://www.dementiameds.com/](http://www.dementiameds.com/) - the evaluation survey can be reached through a link on the left-hand side of the screen.

**SITE CONTENT PRESENTED IN ENGLISH, ITALIAN AND MACEDONIAN.**

**PLEASE EVALUATE OUR SURVEY AT WWW.DEMENTIAMEDS.COM (EVALUATION LINK IS ON THE LEFT HAND SIDE OF HOME PAGE).**
